

MassaPro

MassaPro

The Growth Machine for Customer Service

Replace your entire call center with one Agentic AI platform — orchestrated by our proprietary LLM, priced per agent, not per minute.

The Call Center Is a Cost Center. It Should Be a Growth Engine.

Most enterprises run a fragmented stack — dialer, call center, reporting tool, analytics dashboard, call intelligence layer, QA system — stitched together by per-minute AI token billing that punishes scale.

Cost grows with volume

Every minute of voice or chat costs more. Per-minute AI token billing punishes growth.

Fragmented data

Conversations, insights, and coaching live in different silos across 5–8 vendors.

Rigid capacity

Headcount and per-token fees cap how fast you can grow.

Insight arrives late

Quality control samples 1–3% of calls, post-hoc — too late to act.

AI bolted on

Licensed LLMs, generic voice models, rented infrastructure — none of it owned.

The harder you scale, the more it costs. **Growth becomes the bottleneck, not the breakthrough.**

One Platform. A Complete **Agentic AI Workforce.**

MassaPro replaces the entire call center and customer journey stack with a single, proprietary platform — engineered in-house, owned end-to-end, and orchestrated by our own LLM. No dialer to license. No call center to staff. No reporting tool to bolt on. No analytics layer to integrate. No call intelligence vendor to manage. All of it — in one platform.

What you stop paying for

- Separate dialer licenses
- Per-minute AI token billing (voice and text)
- Standalone QA / call intelligence tools
- Third-party analytics dashboards
- Licensed LLM usage fees
- Human agent headcount that scales linearly with volume

What you get instead

- **One proprietary LLM** orchestrating every customer touchpoint
- **One workforce** of specialized AI agents across every channel
- **One pricing model** — pay per agent + volume, not per minute
- **One platform** that turns service into a growth engine

One LLM. Every Customer Journey. Fully Owned.

At the core of MassaPro is our proprietary Large Language Model — fine-tuned with Direct Preference Optimization (DPO) on real customer interaction data, and aligned to your brand's tone, products, and service scenarios. Unlike providers who license a generic LLM and resell tokens, we own the model — which is why we can price per agent instead of per token.

What our LLM does

- **Reasons across every channel** — voice, chat, email, WhatsApp, social, SMS — one brain, every surface
- **Aligns to human preferences** — DPO training improves helpfulness, tone, and consistency over time
- **Grounds every response in your knowledge** — your docs, your CRM, your product catalog, your policies
- **Coordinates multi-agent workflows** — sales, service, retention, claims agents working as one team

Streams responses in < 30 ms — human-like latency on every voice interaction

Why ownership matters

- No token-based billing surprises
- No third-party model deprecation risk
- Full data sovereignty — your conversations never leave the platform
- Fine-tuning on your domain, not a rented general-purpose model

One Workforce. Every Channel. Zero Handoffs.

MassaPro's proprietary LLM orchestrates the entire customer journey across every channel — voice, chat, email, WhatsApp, social, SMS — with full context preserved as customers move between them. No channel silos. No context loss. No "please repeat your issue" moments.

Voice

Inbound + outbound,
sub-300ms streaming

Live Chat

Web + mobile

Email

Auto-drafted, brand-aligned

WhatsApp

+ social messaging

SMS

Two-way text

CRM Sync

Salesforce, HubSpot, Dynamics

What's different from a typical omnichannel tool

- One AI agent handles the same customer across channels — **no re-routing, no re-explaining**
- Real-time channel switching mid-conversation
- Full interaction history available to every agent, every channel, every time

What "replacing the call center" actually means

- Not a chatbot bolted onto a phone system
- A single **agentic workforce** that meets customers wherever they are
- One brain orchestrating every channel — voice, chat, email, social, SMS

Most enterprises pay 5-8 vendors to deliver what should be one capability: talking to customers at scale. MassaPro consolidates all of it into a single platform, owned and operated by one vendor.

One platform. One vendor. One bill. One brain orchestrating all of it.

Not Chatbots. A Workforce That Reasons, Decides, and Acts.

MassaPro AI agents are autonomous systems — not rule-based bots. Each one reasons about the customer's intent, decides the next best action, executes it (including CRM updates, bookings, lookups, and submissions), and escalates to a human only when truly required. Multiple specialized agents — sales, service, retention, claims, billing — coordinate as a single workforce, handing off context seamlessly.

Specialized agents per role

Each with its own knowledge, personality, voice, and KPIs.

Multi-agent orchestration

Sales → onboarding → retention handoffs with full context preserved.

Multi-step task execution

Bookings, payments, lookups, CRM updates — inside the conversation.

Self-improving journeys

Version control + automated test suites. Every change validated before live.

24/7 capacity

No shift scheduling, no overtime, no attrition, no training ramp-up.

PRICING MODEL

Scale Without Per-Minute AI Token Bills. Pay Per Agent + Volume.

This is the structural shift that turns service from a cost center into a growth engine. Most AI vendors bill per minute of voice or per token of text — which means the more customers you serve, the more it costs. MassaPro flips the model: you pay per AI agent deployed + a volume-based fee, with no per-minute AI token charges for voice or text communication.

The pricing model

- **Per-agent fee** — flat, predictable, per active AI agent on your workforce
- **Volume-based fee** — scales with your interaction volume, transparently
- **Zero per-minute AI token billing** — no OpenAI / Anthropic / ElevenLabs usage fees layered on top
- **Zero per-minute voice charges** — MassaPro proprietary voice recognition + synthesis included

What this means for growth

- **Cost predictability** — your AI bill is known in advance, not a surprise at month-end
- **Margin expansion at scale** — as volume grows, cost per interaction drops
- **Budget reallocates** — money that went to per-token AI bills funds growth initiatives instead
- **Capacity becomes a decision**, not a constraint — adding agents takes minutes, not headcount approvals

For a 1,000-seat call center replacement

\$2.4 M

Traditional stack yearly cost (licenses + tokens + per-min voice)

60–80 %

Cost-per-interaction reduction at scale with MassaPro

0

Per-minute AI token fees (voice + text)

1

Vendor, one bill, one platform

~~Traditional stack: ~\$2.4M/year in licenses + tokens + per-minute voice~~ → MassaPro: per-agent pricing that drops cost per interaction by 60–80% at scale

A Growth Machine, Not a Cost Center.

When MassaPro replaces the entire call center stack, three things happen simultaneously — and they compound.

01

Costs Drop Structurally

- Per-minute AI token billing **eliminated**
- 5-8 vendor licenses consolidated into one
- Human agent headcount scales with growth, not with volume
- **60-80% reduction** in cost per interaction at scale

02

Insight Becomes Continuous

- **100% of interactions** analyzed (not the industry-standard 1-3% sample)
- Real-time sentiment, keyphrase, entity, topic detection on every conversation
- Automated interaction summaries delivered the moment each call ends
- PII redaction built in — stay compliant without workflow changes
- **Clara**, your analytics assistant — ask any question, get a chart in seconds

03

Quality Becomes a Coaching System

- Every interaction scored against your custom criteria
- AI assessors grade to your standards, every channel, every time
- Compliance flags raised the instant a violation occurs
- Top performer patterns surfaced and codified into agent training

The compounding effect

MassaPro.

The Last Customer Service Platform You'll Buy.

One proprietary LLM orchestrating every customer journey. One workforce of AI agents across every channel. One platform replacing your dialer, call center, reporting tool, analytics layer, and call intelligence vendor. One bill — pay per agent, not per minute.

What you get

- A **growth machine**, not a cost center
- A workforce that scales in minutes, not quarters
- A **proprietary LLM** that learns your business, not a rented model
- A pricing model that rewards scale instead of punishing it

What you stop buying

- Per-minute AI tokens (voice and text)
- Separate dialer, call center, QA, analytics, intelligence licenses
- Headcount that grows linearly with volume
- Bolted-on AI from vendors who don't own their stack

Let's replace your call center with a growth engine.
