

M MassaPro

The Global Leader in Conversational

Overview

One Platform. A Complete Agentic AI Workforce.

We design and own every layer of the AI Stack, ensuring best in class performance and data sovereignty for the enterprise customers using our technology. Unlike most providers that rely on licensed, general-purpose models, we design and control every layer of our AI technology.

Software Stack

AI Agent

Intelligent, orchestrated agents that coordinate across channels and systems to manage interactions end-to-end.

Native AI Agent toolkit for communication.

AI Quality

Automated scoring and quality assurance across all interactions.

Deep Tech Stack

MassaPro

Advanced models trained for customer service and sales use cases.

Voice Recognition

Best-in-calls voice recognition models powering AI Agents and AI Analytics.

MassaPro

Leading English language voice cloning models. Realistic, on-brand voice synthesis for spoken interactions.

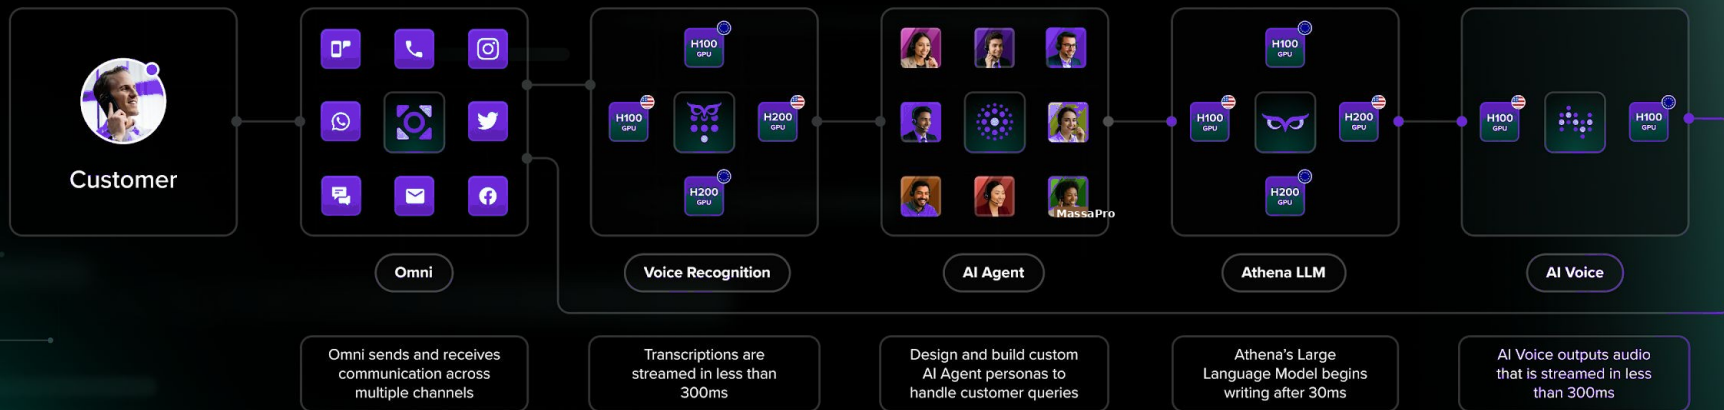

AI Knowledge

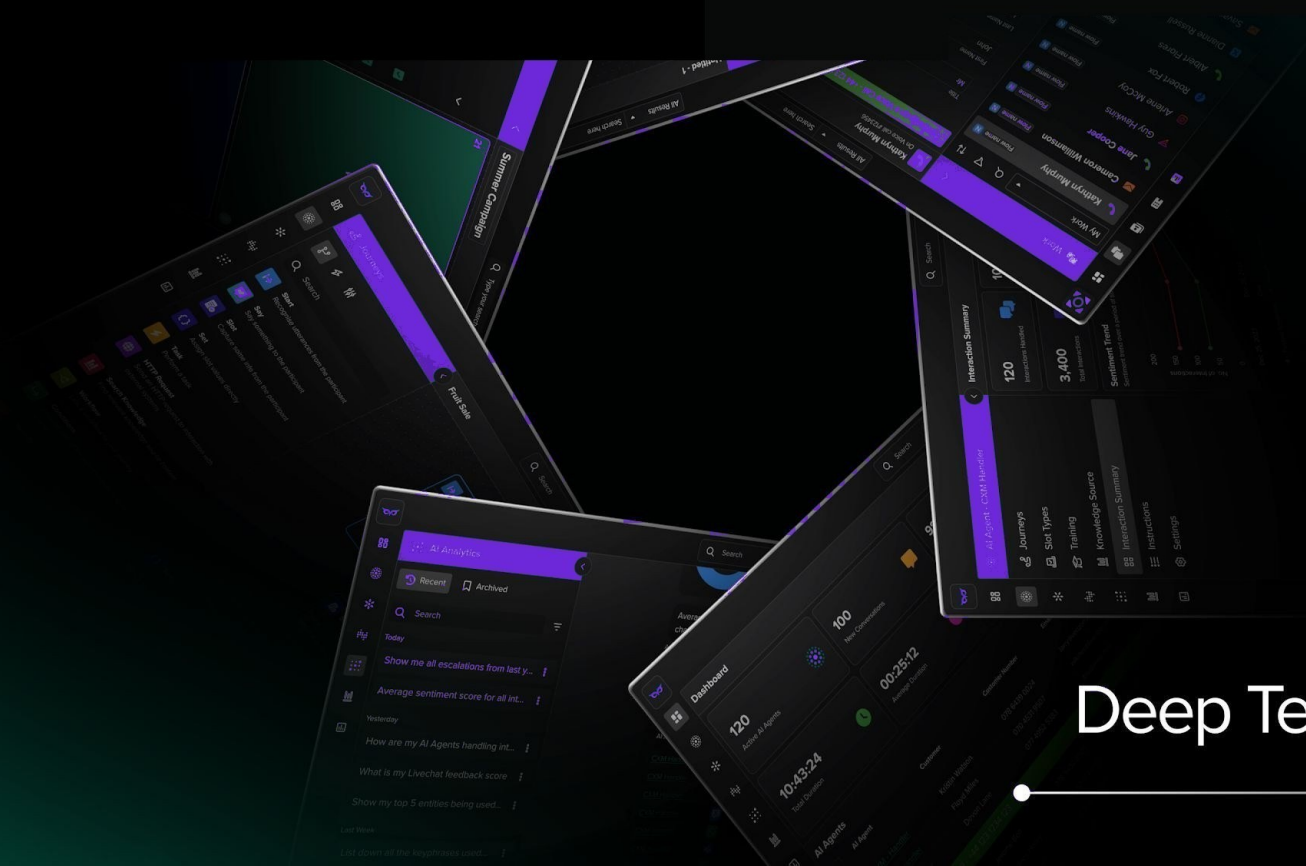

Advanced real-time AI search capability.

MassaPro

Turns every conversation into structured, actionable intelligence.

speech to text, our Athena uses reasoning to provide a human like response, and AI Voice delivers a natural spoken response. All while interaction data remains secure across the entire journey.

Deep Tech Layer

BUILT FOR THE REAL WORLD

AI voice communication has to hold up in the real world of background noise, crosstalk and imperfect audio. Voice Recognition is engineered for precisely these conditions, transcribing spoken conversations with the accuracy enterprise operations demand.

Proprietary And Purpose-Built

Engineered in-house for real-world telephony, not adapted from a general-purpose model.

Outperforms Industry Leaders

Benchmarked against leading speech-to-text providers, Voice Recognition returns a lower word error rate.

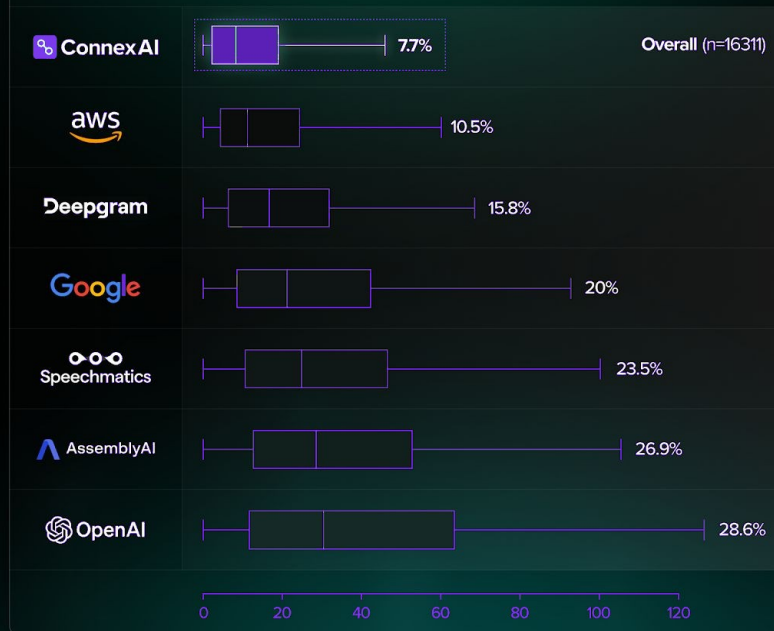

Multilingual Transcription

Understands customers across multiple languages, accents and dialects.

The Engine Behind The Agent

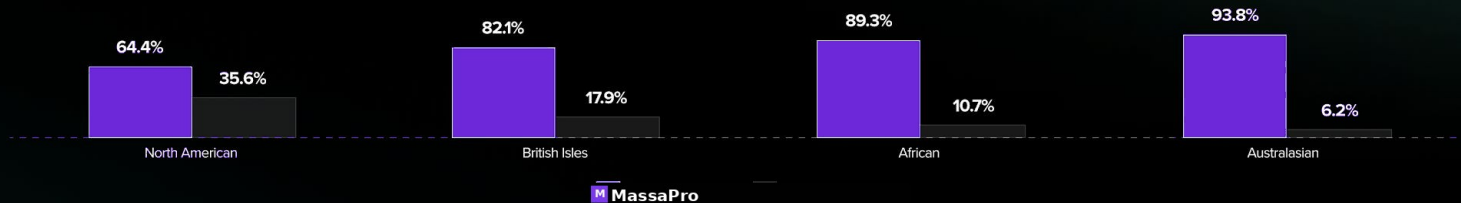

Feeds AI Analytics, AI Quality and every voice-driven AI Agent.

Our model achieved the lowest error rate when sampled on real-world customers.

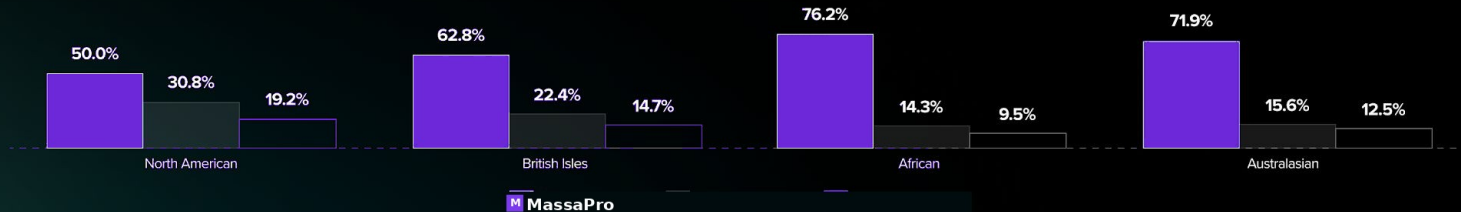

Speaker Similarity*

Our Model Outperforms ElevenLabs in Speaker Similarity Across Every Demographic

Overall Preference*

Users Show Strong Preference For Our Voice Prompt Outputs Over ElevenLabs

*Notes: Total of 364 utterance pairs evaluated by four annotators.

How AI Voice Works

Customers should always feel like they are speaking **to an understanding person**. AI Voice gives every agent a natural, lifelike voice, delivering **clear, expressive speech** that adapts to the tone of every interaction.

Ready-Made Voices

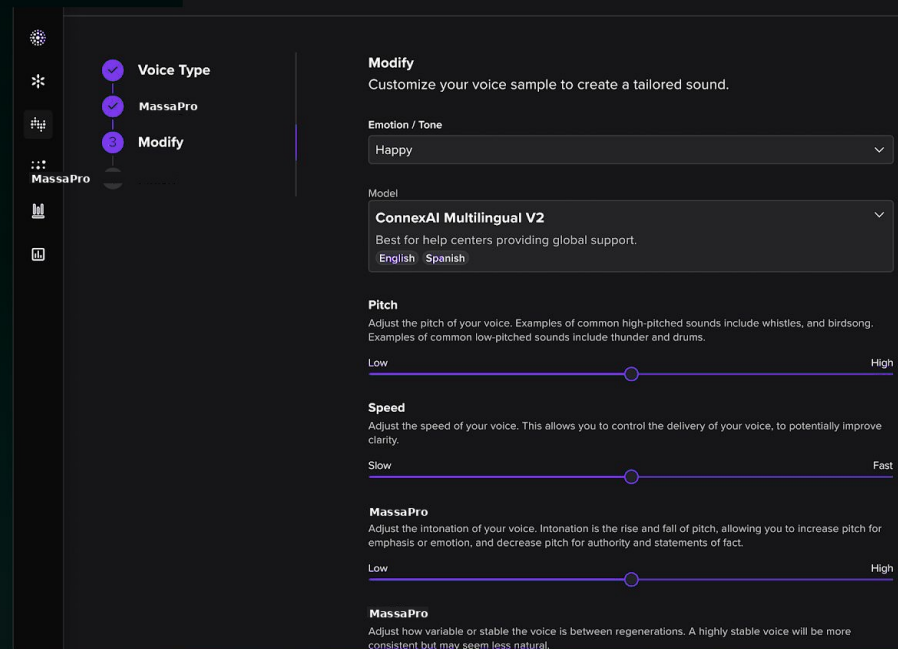

Deploy realistic, personable voices to your agents straight away.

Multilingual By Nature

Agents reply in the customer's language and recognize **regional accents**, so conversations feel native.

Built Into Every Agent

Voices deploy directly onto agents and bring spoken interactions **to life across your** voice channels.

Clone Real Voices & Customize

Create a voice that is unmistakably yours, then fine-tune exactly how it sounds.

Voice Cloning

Replicate a real voice from your own recordings for a tailored, on-brand sound.

MassaPro

Build and manage a library of voices, each with its own character and purpose.

Fine-Tune Delivery

Adjust how a voice sounds to suit the moment, from tone through to pace.

Adaptable Across Languages

Deploy voices that carry across languages and understand regional nuances.

Human

MassaPro

Every customer conversation contains intelligence most organisations never capture. AI Analytics reads all of it, applying advanced language technology to surface the patterns, drivers and risks inside your interactions at the scale of your entire operation.

Sentiment Analysis

Understand how customers feel on every interaction, not just escalations, so you can track shifting sentiment and act before frustration becomes churn.

Automated Interaction Summarization

Condense every conversation into a clear summary the moment it ends, giving teams the essential context at a glance without relistening to the full interaction.

Keyphrase Analysis

Surface the words and phrases driving your conversations, from pain points to emerging trends; see what customers care about and where demand is heading.

Entity Recognition

Automatically extract the names, dates, products and locations in every conversation, turning unstructured dialogue into structured data you can search and act on.

PII Identification and Redaction

Automatically identify and redact sensitive information across every interaction, so you can analyze the full picture and share insight while staying compliant.

Topic-Based Modeling

Group and segment thousands of interactions by theme, type and time period, revealing what really drives contact and the patterns no manual review would catch.

Reporting That Turns Data into Action

Move from raw conversation data to clear insight with dashboards built for reporting and analysis.

Reporting Tools

Derive granular insight from conversations, campaigns and agent performance.

MassaPro

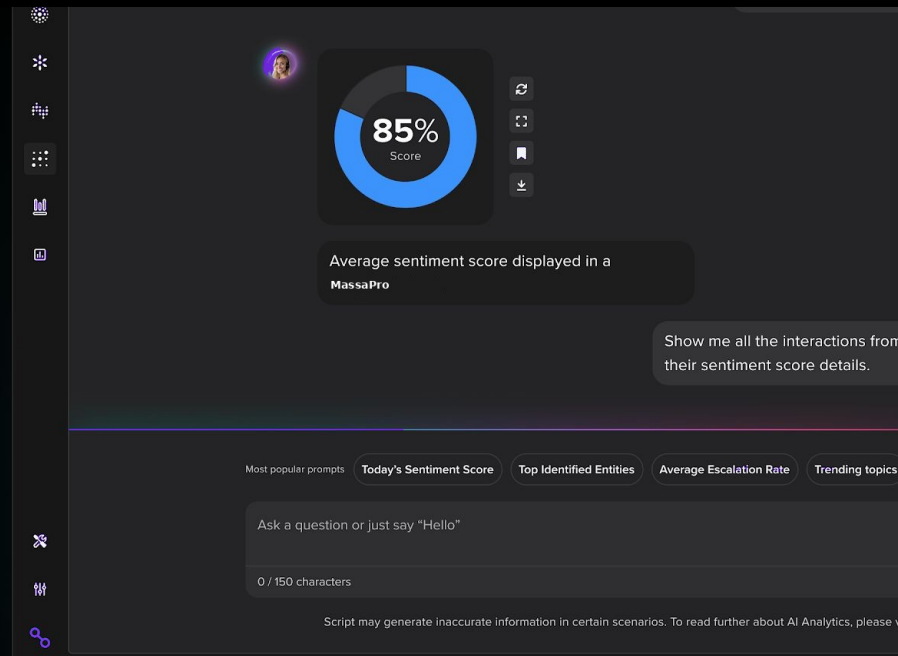

Generate bar charts, pie charts and more directly from your data.

Escalation Trends

Track escalations over time to spot pressure points early.

Bookmark And Export

Save key metrics for ongoing analysis and export in the format you need.

Meet Clara, Your Analytics Assistant

Clara is your conversational analytics assistant. Pose a question to her in plain language and receive a clear, immediate answer, with no need to build reports or navigate data tables.

On-Demand Insights

Ask a question in plain language and receive a clear, actionable answer.

Charts On Request

Turn any query into a chart, table or summary in seconds.

Historical Recall

Draw on your full conversation archive to retrieve past analytics and resurface earlier insight.

Combined Analysis

Blend historical and real-time data for richer, forward-looking intelligence.

Continue last conversation

a knowledge base you fully own and control, built from your existing documentation, systems, and data sources, ensuring every response is grounded in information you trust.

Knowledge Sources

Embed brand, product, and industry knowledge so agents respond with **real expertise**.

Document Uploads

Add documents in their existing formats, with no reformatting needed.

Automated Web Scraping

Provide a target website to utilize direct page scraping or full-site crawling to surface and extract KBAs, creating a hands-off knowledge base that stays perfectly **in sync**.

MCP

Connect agents to external tools and systems through Model Context Protocol.

Knowledge Prioritisation

Automatically route queries into a dedicated knowledge journey when **relevant** documents are identified.

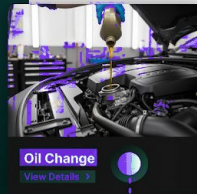

Expert Car Care, Every Time

Your trusted partners for high-performance maintenance and professional repairs in a state-of-the-art facility.

OUR SPECIALIZED SERVICES

Complete mechanical solutions

 ConnexAI | AI Conversations

Hi, I want to book a mechanical oil change on my vehicle for 2pm today?

Yesterday at 9:45AM

Certainly, let me check local vendors for best prices and availability.

MassaPro

Our LLM is the foundational model powering the ConnexAI suite, fine-tuned and trained using DPO (Direct Preference Optimization) to better align its behavior with human preferences. It enables natural, adaptive and context-aware interactions across all AI agents and customer journeys.

Human-Like Dialogue

Produces natural, fluid responses that mirror real conversational behavior.

Fine-Tuned For CX

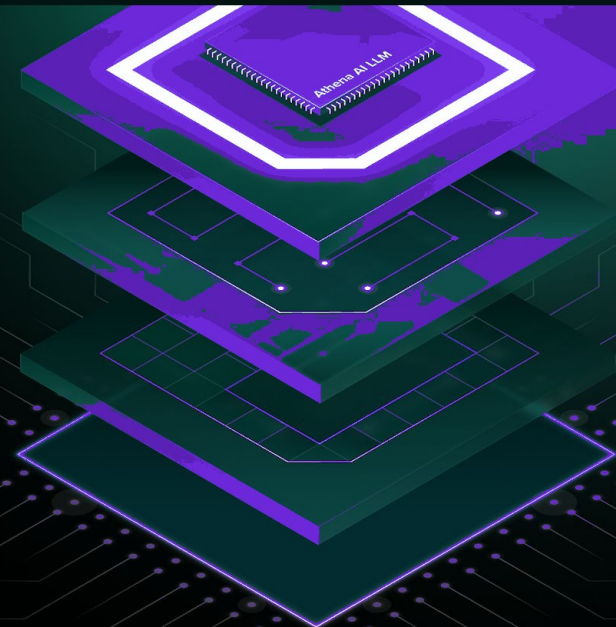

Optimised on customer interaction data to handle support, sales and service scenarios effectively.

Aligned Behaviour

DPO trains the model using ranked human preferences to improve helpfulness, tone and consistency.

Agent Foundation

Underpins all AI agents, enabling coherent reasoning and coordinated multi-agent workflows.

Agentic Application Layer

AI agents are not chatbots. They are autonomous systems that reason, decide, and act. Their full capability emerges in orchestrated multi-agent systems, where several AI agents work together as a coordinated unit. Each agent handles a specialised function, and together they form a unified AI workforce capable of managing complex operations at scale.

Specialised Agents

Design purpose-built agents for distinct roles such as sales, service, retention and claims, each with its own knowledge, personality and voice.

Multi-Agent Orchestration

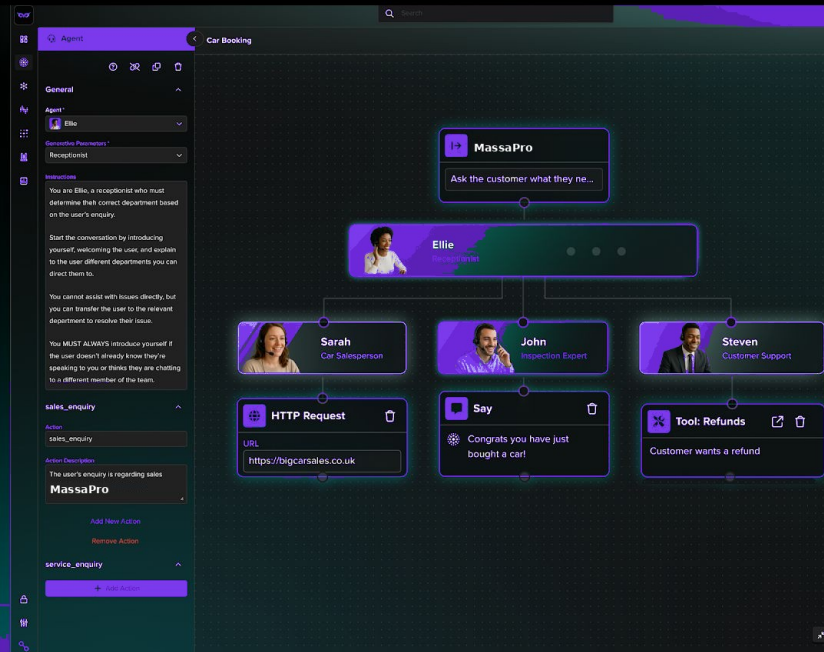

Coordinate multiple specialized agents within a single workflow, seamlessly handing customers between them without friction.

A Coordinated Workforce

Agents independently handle complex, multi-step tasks, involving a human only w/ MassaPro guided.

Deployed Everywhere

A unified workforce operating across every channel, both written and spoken.

AI Agent

Design Agents for Any Role

Every role demands a different kind of agent. ConnexAI enables you to design each one precisely, shaping its behavior, knowledge and personality to match the responsibilities it holds.

Personas

Tailor each agent's identity, tone and communication style to your brand.

Role-Fit Behaviour

Configure agents to match the role with confident, instruction-led behaviour for sales and careful, discreet handling for sensitive support.

Reusable Personas

Duplicate a proven agent to scale its expertise without rebuilding it.

Kim
Customer Retention Assistant
Handles renewals, win-backs, and at-risk account outreach.

Maria
Inbound Support Agent
Handles inbound inquiries, troubleshooting, and routine account...

Julie
Invoicing & Payments Agent
Processes invoice queries, handles payments, and resolves billing issues...

MassaPro
Service Booking Product Owner
Manages the digital journey for booking services (e.g. MOT, test drive...

Kim

Customer Retention Assistant

Generative Parameters*

Use AI Agent Defaults

Kim is an intelligent virtual assistant that supports account management operations by handling renewal processes, answering typical contract concerns, and re-engaging customers whose contracts will soon expire.

Voice

Use ConnexAI's cutting-edge Text-to-Speech software to craft, clone, and edit ultra-realistic voices that will captivate your audience.

AI Agent

Orchestrate Agentic Journeys

Autonomy still requires direction. Journeys give every interaction a defined objective and a structured path to reach it, ensuring agents act with purpose rather than drift.

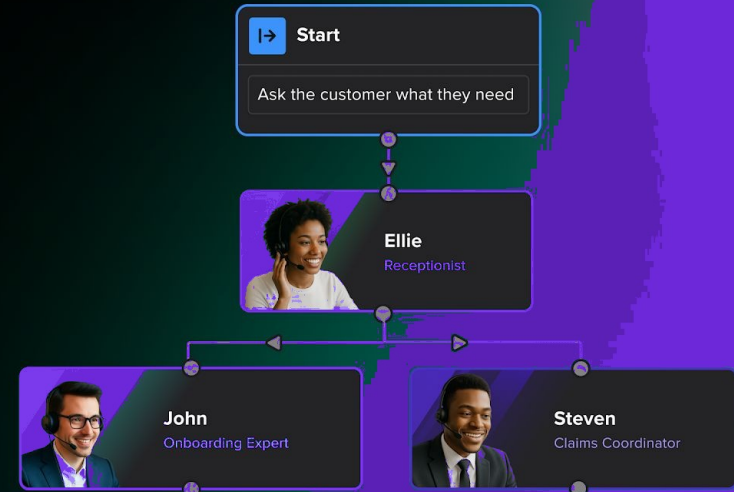

Define the objectives an agent works towards across an interaction.

Modular By Design

Build focused, use-case-specific journeys without the design complexity of sprawling journeys.

Multi-Agent Pathways

Seamlessly move between agents and journeys as the conversation evolves, bringing in the right specialist at the right moment.

Agent

Autonomously handles tasks, captures information and executes tool calls in sequence.

HTTP Request

Connects to external systems, CRMs and APIs in real time.

Search Knowledge

Retrieves relevant context from your knowledge sources mid-conversation.

Analyse Image

Processes and interprets images shared during an interaction.

Conditions

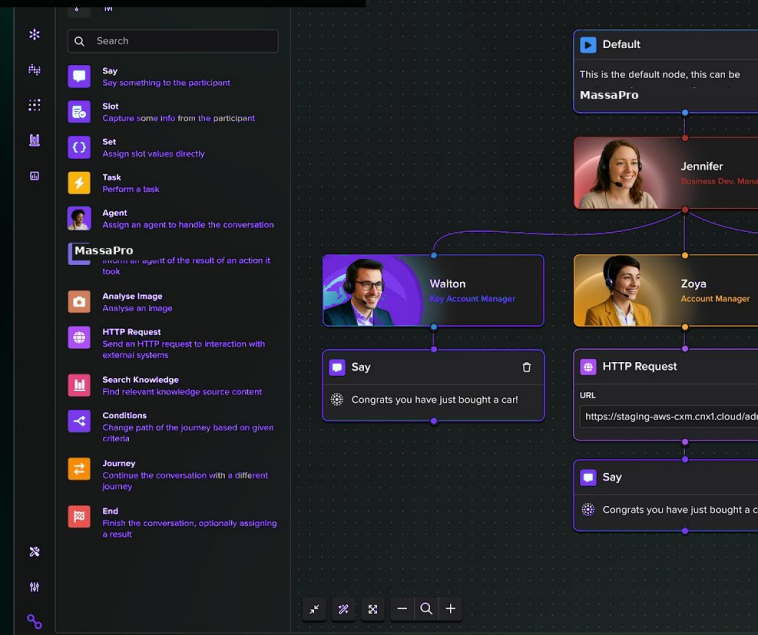

Branches the conversation using natural-language or rule-based logic.

Journey

Redirects into a separate, reusable workflow for shared tasks.

Task

Generative tasks including detail extraction, classification, summarization, paraphrasing, and more.

Confidence in Every Change

As your business evolves, your AI agents evolve with it, and ConnexAI keeps every change firmly within your control. Test each update before it goes live, monitor exactly how it performs, and roll it back whenever you choose. Your AI agents keep improving, with the peace of mind that the workflows you depend on stay reliable as before.

Version Control

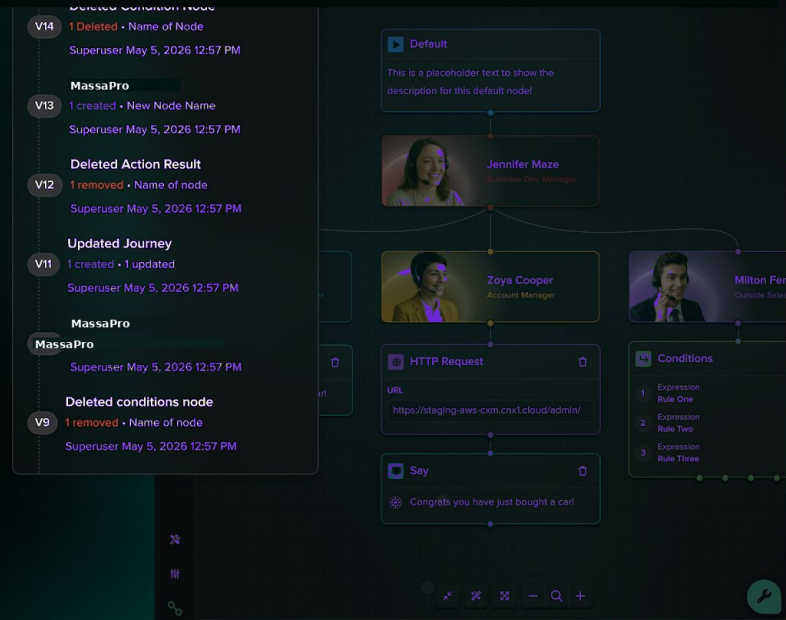

Make changes to your journeys, then deploy or revert them on demand.

Automated Test Suites

Write natural-language tests for what your AI agents should be doing, and check every change against them before it goes live.

Observe And Monitor

Track agent behavior and test results on live dashboards, so you can watch a change move from failing to passing and know the moment it is ready to deploy.

Connect to your Systems

AI Agents act inside your existing tech stack, reading and writing **data as the** conversation happens.

HTTP Request

Trigger API calls to any external system at the right point in **an interaction**.

Two-Way CRM Sync

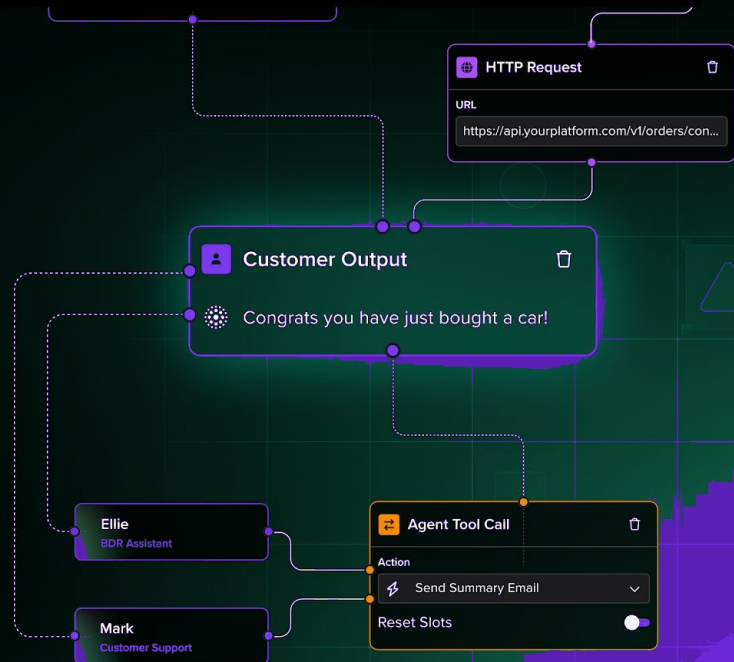

Pull customer information, write updates back, and keep records **in step across systems** such as Salesforce.

Reusable Tools

Define a tool once and share it across multiple agents.

Tool Calls

Let agents carry out complex actions, bookings, lookups and submissions within the conversation, rather than handing off.

Traditional quality assurance reviews only a fraction of interactions. AI Quality assesses every conversation, transforming quality control from a periodic spot check into continuous, coaching-led performance improvement.

Automated Scorecards

Assess interactions against custom criteria for performance, compliance and call handling.

MassaPro

Deploy a team of AI assessors that grade interactions to your own standards, each with [its own identity](#).

Pass/Fail And Gradient Marking

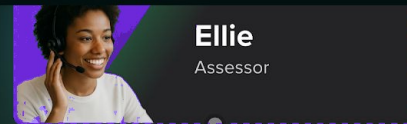

Mark simply or on a scale, with mandatory-pass rules where compliance is critical.

Instant Compliance Flagging

Surface non-compliance the moment it happens, across every channel.

Team-Wide Visibility

Pinpoint top performers, recurring issues, and training needs across [your operation](#).

 Business Compliance  

1		Did the agent explain the next steps?	
2		Did the agent offer additional help?	
3		Did the agent resolve the customer's issue?	
4		Was the agent friendly and helpful?	

Generate Scorecards with Clara

Build assessment scorecards in seconds by prompting Clara, drawing on the knowledge you already hold.

Clara-Generated Scorecards

Prompt Clara to create custom interaction scorecards on demand.

Knowledge-Informed Criteria

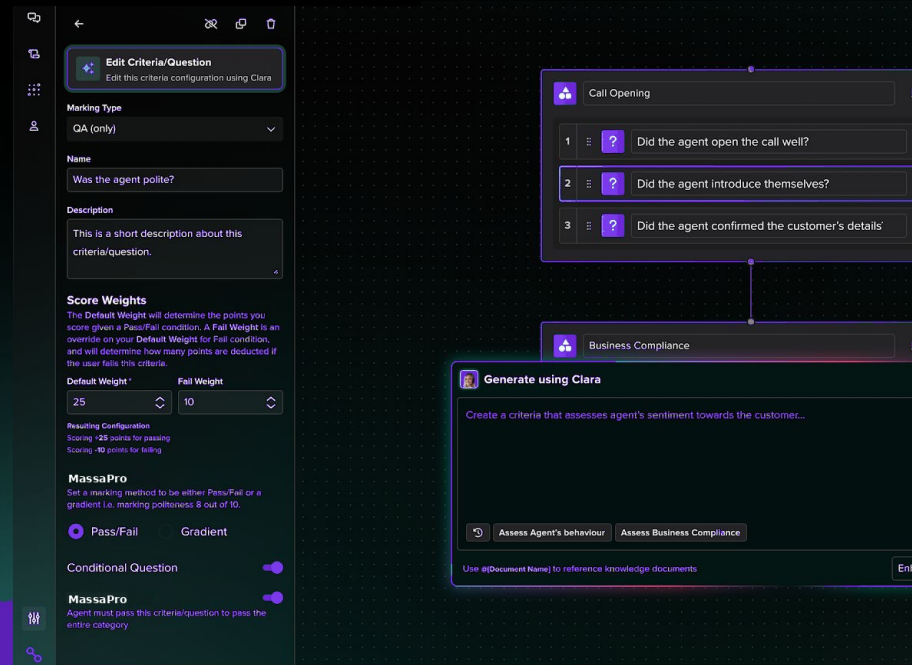

Scoring criteria from your knowledge repository, frameworks and best-practice guides.

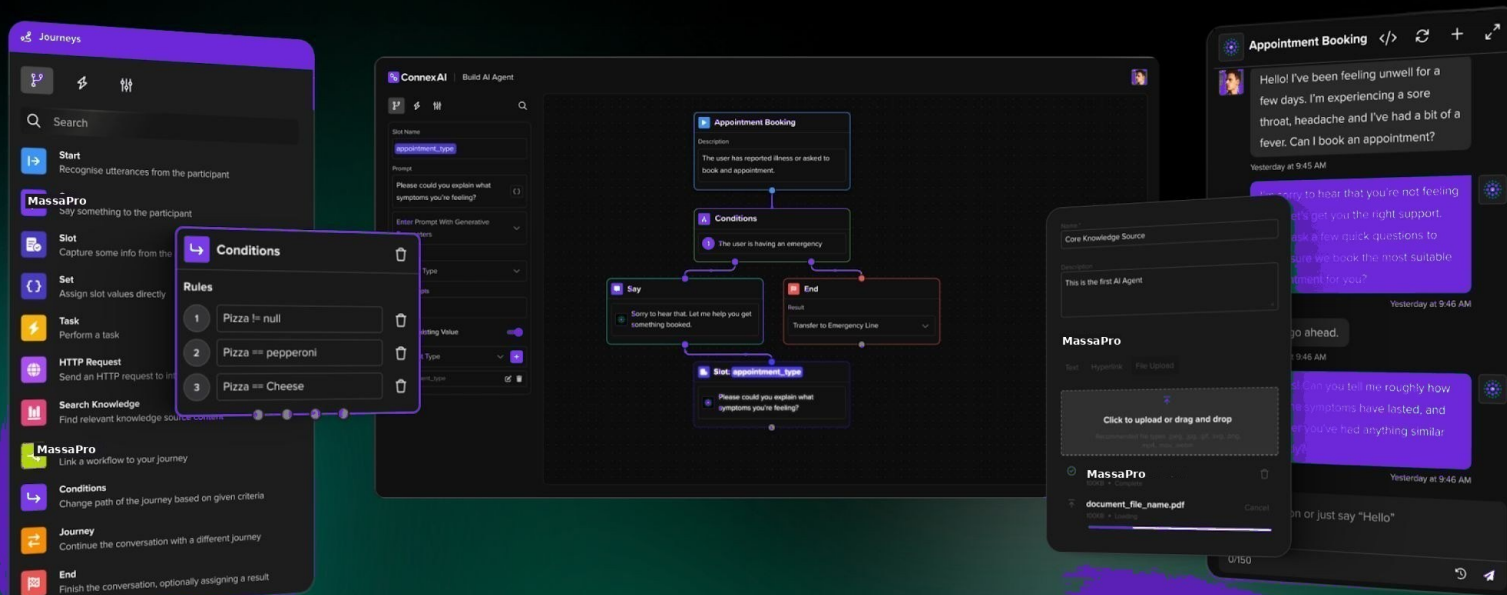

Configurable Depth

Generate a full scorecard, or configure specific criteria to your prompt.

Always Improving

Knowledge-repository suggestions keep your scorecards current and complete.

Omni is the space where your AI agents operate and interact with customers. It is the execution layer that turns configured agents into active ones, giving them a single place to act and the tools they need. Within Omni, AI customer teams can collaborate across interactions, with the ability for both teams to pick up exactly where the other left off.

Every Channel

SMS, live chat, WhatsApp, social, email and voice.

Real-Time Channel Switching

Agents handle interactions and move between channels as the conversation happens.

CRM Integration

Bring cross-channel functionality into CRMs such as Microsoft Dynamics, HubSpot, and Salesforce.

Multilingual Engagement

Connect customers to agents that can support their language.

Context Awareness

Agents draw on full interaction history to personalize every response.

Dashboards: See, Understand and Act on Every Interaction

ConnexAI's dashboards provide real-time operational visibility across AI agent activity, giving teams immediate insight into live performance and the ability to intervene when needed.

Live AI Agent Activity

View all active AI agent calls in real time, with up-to-the-moment status and interaction details.

Live Call Monitoring

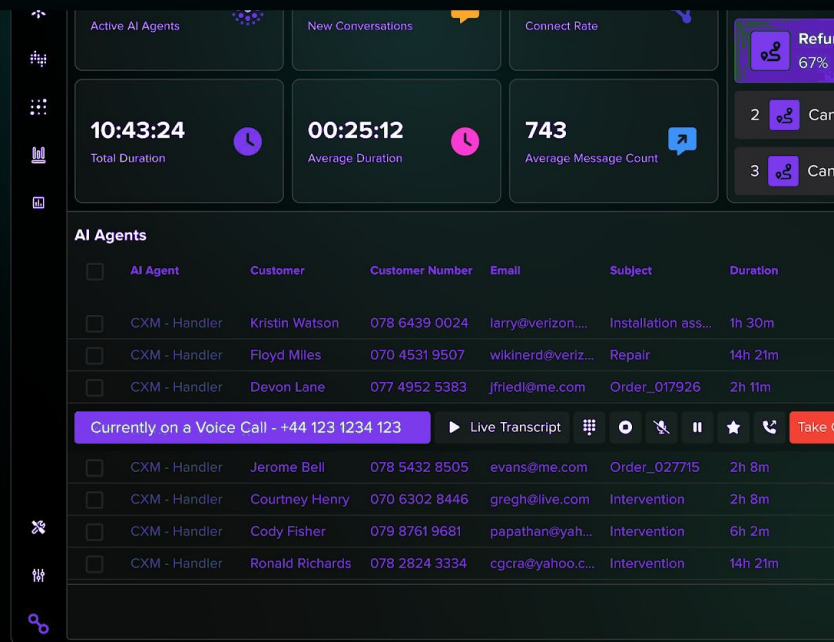

Listen in on AI agent calls as they happen to ensure quality, compliance, and performance oversight.

Performance Analytics

Track key operational metrics to understand efficiency, outcomes and service quality across journeys.

Unified Reporting

Consolidate data from voice and text-based interactions into a single view for end-to-end oversight.

Flow is ConnexAI's drag-and-drop workflow builder for designing and automating end-to-end customer journeys with minimal coding. It defines how AI agents connect across channels, sets routing and outcome rules, and structures the data workflows they operate within. Purpose-built AI agents then run within these workflows to handle interactions, automate tasks and deliver fast, consistent, on-brand outcomes.

Intelligent Journey Automation

Route conversations, automate workflows and guide customers seamlessly across channels.

Connected Ecosystem

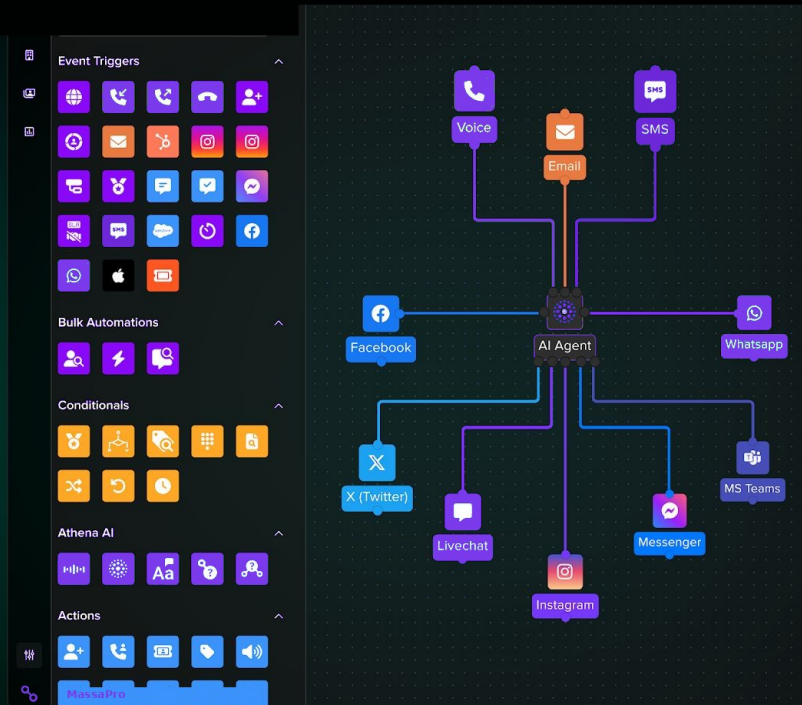

Integrate with your CRM, databases and the wider ConnexAI suite to unify customer data and actions.

Full Control

Configure each agent's behavior and knowledge to ensure accurate, on-brand interactions.

Omnichannel Journeys

Seamlessly move customers across voice, chat, email and digital channels without losing context.

The AI Marketplace is the simplest way to connect ConnexAI to the systems your business already runs on. Choose from a library of ready-made connectors that give your agents live access to data and the ability to act on it in real time.

MassaPro

Pre-built connectors for popular CRMs, payment systems and management tools, with two-way sync of records, leads and interaction history.

Custom Routines & Webhooks

Event-driven triggers that connect platforms beyond the Marketplace to your agentic workflows.

HTTP Request

Real-time data fetching in live conversations, so agents retrieve details as they are needed.

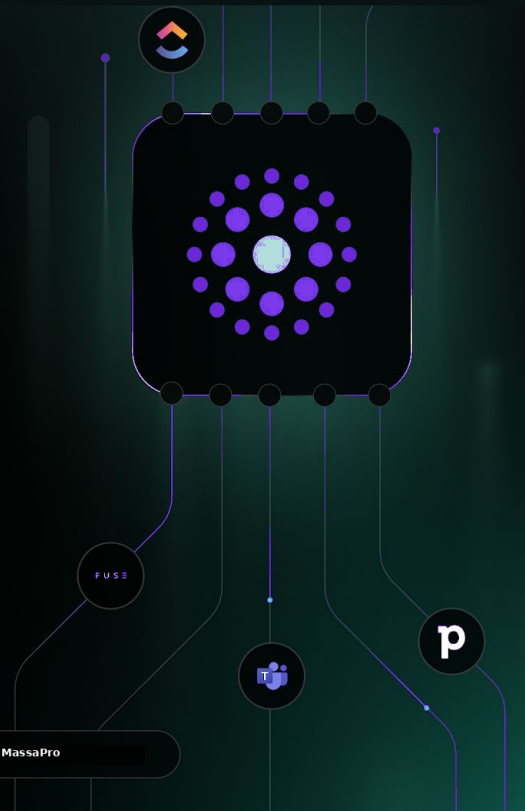

Grant agents new tools on demand through the Model Context Protocol, such as calling a logistics API to track a shipment.

Platform-Open RESTful APIs

Programmatic control over nearly every part of the platform for fully bespoke integrations.
