

A Technology Partnership

ConnexAI

Executive Summary

Introduction

Thank you for providing ConnexAI (HQ - Manchester UK) with the opportunity of providing [REDACTED] with a proposal for the ConnexAI Conversational AI Solution to maximise client contact and improve conversion by using AI Agents to follow-up and nurture of high volumes of enquiries, FAQ's, quotes and more.

[REDACTED] - Business Challenges

Continued growth whilst maintaining excellent customer satisfaction are leading to increasing volumes of client enquiries, often that need to be managed manually by 4 team members, often reaching around 1,500 quote enquiries per month. This is leading to long wait times, challenges with follow-ups and nurturing prospective client communication in a structured format to impact conversion. Routine inquiries such as; case updates, quote requests, or appointment scheduling consume valuable staff time, reducing the ability to focus on more complex, higher value legal work. At the same time, there is a requirement to use different communication channels across the organisation to personalise communication to different audiences. Currently there is limited insight into real-time client sentiment or emerging trends. Without integrated omnichannel tools and AI-driven analytics, it's harder to scale by responding proactively to client needs, making informed decisions or monitoring performance - all of which can affect client satisfaction and importantly growth.

Objectives:

Streamline the handling of high enquiry and quote volumes by delivering instant, accurate responses across multiple communication channels. Implementing structured, consistent follow-up processes enables more efficient enquiry management and significantly improves conversion rates from quote to active case.

From an operational standpoint, AI agents will manage data capture, appointment scheduling, case status updates, and document requests, reducing manual workload and supporting more efficient use of staff resources. Enabling scalability, cost control, and better allocation of time toward higher-value legal work.

ConnexAI Proposed Business Solution

ConnexAI will provide a offers a tailored solution to support your law firm's communications, contact centre, and AI needs, designed to handle high volumes of client enquiries and quote requests with speed and precision. Our AI-driven platform integrates outbound calling, real-time reporting, and advanced supervisory tools to ensure consistent, efficient communication across all channels.

AI Agents will manage routine interactions such as quote requests, case updates and appointment scheduling, freeing up your team to focus on more valuable matters. This not only enhances client experience through faster response times but also increases your capacity to handle more leads without additional headcount.

Using AI Agents for initial contact, engagement and follow-ups, ConnexAI will support X Solicitors to significantly increase conversion of enquiries and quotes into active cases.

Real-time analytics provide insight into enquiry trends, helping you refine contact and case efforts, identify opportunities, and stay ahead in the market.

Challenges

In a legal environment, fee earners plays a crucial role in delivering exceptional customer service. However, as customer expectations grow and businesses scale, law firms face several challenges that can impact efficiency and satisfaction. Leveraging AI technologies can help address these issues, streamline operations, and enhance the overall customer experience. Below are some key challenges faced by Law firms:

- Client intake
- Lead qualification
- Appointment scheduling
- FAQ handling
- Document drafting
- Legal research assistance
- Case status updates
- Billing inquiries
- Compliance monitoring
- Internal knowledge retrieval
- Contract review
- Time tracking prompts
- Discovery support
- Conflict check automation
- Onboarding new clients
- Language translation
- E-discovery coordination
- Client reminders
- Staff training assistance
- Feedback collection
- Managing Customer Expectations

Law Firm Objectives

- **Enhance Client Engagement:** Improve the quality and frequency of client communication through instant, personalised responses across multiple channels, maintaining strong client relationships.
- **Increase Operational Efficiency:** Automate routine legal tasks such as scheduling, intake, and document retrieval, allowing legal professionals to focus on higher-value case work.
- **Improve Client Support Availability:** Provide 24/7 support for common client queries, case status updates, and appointment bookings, enhancing responsiveness and client satisfaction.
- **Support Business Development:** Assist in lead qualification, client onboarding, and nurturing prospects through timely, relevant follow-ups and legal service recommendations.
- **Deliver Legal Personalisation at Scale:** Offer tailored legal information, service recommendations, and updates based on each client's case type, history, and preferences.
- **Reduce Administrative Costs:** Automate client communications, intake, and internal workflows to decrease reliance on manual processes and reduce staffing overhead.
- **Gather Actionable Legal Insights:** Capture data from client interactions to identify trends, improve service offerings, and guide strategic decisions in practice areas.
- **Improve Response Times and Client Trust:** Ensure clients receive fast, accurate answers to legal FAQs and updates, reinforcing trust and professionalism.
- **Enable Multilingual Legal Support:** Communicate with clients in their preferred language, increasing accessibility and inclusivity in diverse or global client bases.
- **Scale Legal Operations Efficiently:** Handle increased client volume and case complexity without proportional growth in staff, maintaining service quality.
- **Enhance Client Self-Service:** Empower clients to access case information, legal FAQs, and document portals through conversational interfaces, improving autonomy and satisfaction.
- **Streamline Internal Legal Workflows:** Route inquiries to appropriate legal teams, manage case handoffs, and integrate with legal management tools for greater efficiency.
- **Ensure Data Security and Legal Compliance:** Handle client data in line with legal and regulatory standards (e.g., GDPR, HIPAA), reducing risk and enhancing trust.
- **Foster Long-Term Client Loyalty:** Deliver consistent, high-quality interactions that build strong, ongoing relationships and increase client retention.

Law Firm Objectives - Continued

- Automate Legal Intake Processes: Collect and verify client information efficiently through AI-driven intake forms and dialogues, reducing friction and errors.
- Assist in Contract Review and Management: Help review, summarise, or track contract obligations using conversational AI for faster, more accurate legal work.
- Improve Knowledge Management: Provide staff with instant access to firm-wide legal precedents, memos, and policy documents via conversational interfaces.
- Support Legal Research: Aid lawyers in retrieving relevant case law, statutes, or summaries through natural language queries, speeding up research.
- Enhance Compliance Monitoring: Use AI to flag compliance issues, missed deadlines, or outdated client data, supporting internal audit readiness.
- Increase Accessibility for All Clients: Offer voice and text-based legal support for clients with disabilities or limited digital literacy, promoting equity and inclusion.
-
- Boost Brand Loyalty: Consistently deliver high-quality, personalised interactions that foster long-term trust and loyalty with customers, encouraging repeat purchases and brand advocacy.

Proposed Solution - ConnexAI

Athena Large Language Model

Effortlessly train Athena by uploading contextual information sources and documentation, transforming your AI products into knowledgeable and contextually aware team members.

AI Agent

Automate customer interactions, streamline communication and improving overall customer satisfaction by ensuring swift and accurate responses to customers through any channel.

AI Voice

Foster humanistic interactions with AI Voice, improving customer satisfaction with intelligent text-to-speech assistance that is tailored to your brand's tone of voice, formality, and language requirements.

AI Guru

AI Guru is your revolutionary internal assistant, designed to boost productivity. Transform how teams interact with customers, offering instant access to practical knowledge and unparalleled support.

AI Analytics

Gain a holistic view of customer support across all channels. AI Analytics empowers leaders with data-driven insights to refine strategies, enhance decision-making and streamline business processes.

Automatic Speech Recognition

With 99% accuracy, ASR can scale to handle varying call volumes without the need for additional staff. Easily manage staff during peak times or in response to specific events that lead to increased call traffic.

Unlock Cross-channel Communication

Interact with your customers on their preferred communication channels

Switch between SMS, voice, social media, live chat, email, or WhatsApp seamlessly with no wait times. Let our platform do the work and free up your customer teams to focus on high value interactions.

Centralised hub for customer data and interactions

Customers expect nothing less than a consistent experience across the channels you communicate on, and 73% might switch brands if they don't get it. With ConnexAI's Omni centralised hub, users can move between all channels with ease.

Fully integrated Live Chat

Seamlessly integrate Athena's AI Agent alongside your teams to maximise workforce efficiency. Let AI initiate more leads with the ability to escalate interactions to a person when the human touch is needed. Give quick, effective responses to your customers' queries and achieve up to a 40% increase in conversion rates.

Innovative click-and-drop tool for creating customer journeys

Design each and every step of the customer's journey without writing one line of code. Seamlessly switch channels, sort enquiries, and build experiences that are so proactive and convenient that every customer will feel like a VIP.

SMS

Support straight to your customers phone

Voice

Organised and categorised dialling

Live Chat

Prompt website customers with Live Chat

Secure and trusted online payments

Athena Integration

Automate conversations with Athena

WhatsApp

Contact over 2 billion WhatsApp users

Email

Keep responses neat and formal

Dialler

Next level features in a user friendly dialler

Flow

Click-and-drop tool for creating customer journeys

Social Media

Connect with billions of customers

Product Overview

Products to Power Any Business

Athena

AI designed to reshape customer engagement. Athena's flagship features redefine the possibilities of communication by enhancing internal processes and transforming interactions.

Omni

Every channel, in one easy to use interface, fully equipped with SLA timers, interaction history and message prompts. Enable self-service functions with AI generated canned responses.

Quality

Quality provides an intelligent blend of AI and Human assessment, providing the most comprehensive analysis of interaction behaviour. Group criteria to track patterns and trends across completed interactions.

Form

Create dynamic online forms with a user-friendly design canvas and advanced business logic. Save time and reduce errors by collecting the right data with conditional formatting and validation rules.

Workforce

Stay one step ahead by forecasting busier periods and allocating resource accordingly. Workforce provides custom scheduling tools, AI-based forecasting, and a user-friendly calendar system.

Gamify

Gamify brings users a fresh and engaging workplace experience. Combined with centralised business intelligence, Gamify offers real-time insights into team productivity and tools to boost workplace efficiencies.

Knowledge

Everything you need to create a detailed knowledge base, handle customer queries with ease, create training guides and build a holistic suite of articles brimming with guides to empower your customers.

Link

Enables seamless communication between colleagues. Send messages, share files, and connect with team members using voice and text. Collaborate effortlessly in a single, easy-to-use interface.

Monitor

This pioneering screen recording software enables intelligent recording, playback and reviewing of your team's activity to provide an unmatched level of insight, allowing management to improve efficiencies.

Marketplace

Select from 100s of popular apps in our Marketplace, or build custom routines to suit whatever workflow you want. Enjoy our no-hassle approach to integrations, whether you're taking payments or managing projects.

Research-backed Statistics

- Lawyers save up to 260 hours/year (~32.5 workdays) using generative AI
- 16% of chargeable work in top firms is estimated to be automatable with GenAI
- 28% of legal professionals in firms now use GenAI tools regularly
- 76% of in-house teams and 68% of law firms use GenAI at least weekly
- LLMs achieved 92% accuracy in invoice review vs. ~72% for experienced lawyers
- Invoice review time cut from ~194s to 3.6s, reducing costs by ~99.97%
- Common AI legal tasks:
 - Document review (74%)
 - Legal research (73%)
 - Summarisation (72%)
 - Memo/draft writing (59%)
 - Contract drafting (51%)
 - Correspondence drafting (50%)
- Allen & Overy ran 40,000 GenAI queries during internal pilot
- MinterEllison targeted 80% AI adoption by lawyers and partners
- GenAI adoption in legal nearly doubled from 14% to 26% in one year
- GenAI helps law firms do more work with same headcount
- Tools like Harvey AI and CoCounsel being widely deployed in top firms
- Firms report 2–5 hours/week saved per lawyer using AI tools
- GenAI outperforms junior associates and LPOs in contract review accuracy
- Firms expect shift in hiring from junior lawyers to tech-skilled staff
- AI tools aid in legal research, summarisation, and workflow routing
- GenAI improves response time and accuracy in client communication
- Helps meet GDPR, HIPAA, and data security compliance standards
- AI tools enable scalable, multilingual client service for global reach

ConnexAI

ROI Illustration

Assumptions:

- AVG Revenue per case: £1,400
- AVG 1,500 quote enquiries per month
- 41% conversion = 622 converted = £870,800
- AI to increase conversion to 50% in phase 1
- 50% conversion = 750 converted = £1,050,000

Monthly net gain: £179,200

AI solution monthly cost: £15,000

Summary:

- Revenue from AI-generated new leads: £2,150,400 annually
- Annual cost of AI solution: £180,000.
- Net gain: £1,970,400
- Payback Period: 2 months

Additional benefits:

- 24/7 enquiry handling (evenings/weekends) across all channels
- No training or challenges with scalability
- Instant quote generation and CRM updates
- Improved client satisfaction (faster responses)

Anonymised UK Law Case Study

Overview

A forward-thinking law firm facing increasing client demand and high staff turnover sought a scalable solution to improve operational efficiency. The firm was receiving a high volume of client enquiries across multiple channels, along with ongoing recruitment needs due to rapid growth and attrition. Traditional methods of managing communications, both with clients and potential hires were proving time-consuming and inconsistent, leading to missed opportunities and strain on internal resources. By integrating AI agents, the firm aimed to streamline client interactions, automate follow-ups, and support recruitment workflows, all while maintaining a high standard of professionalism and responsiveness expected in the legal industry.

The Solution

The company adopted ConnexAI AI Agents - deploying 50 Generative AI Agents built with the customers own knowledge-base into the LLM. These AI agents were prompted to:

- Respond to Initial Enquiries (Inbound): Engage prospective customers immediately, answer common questions about specific cases, assess circumstances, analyse documentation and provide options for transacting,.
- Qualify Leads: Use conversational workflows to determine genuine interest, gather key information and confirm readiness for engagement and case creation.
- Book Consultations: Integrate with live calendars to schedule calls directly with team, significantly reducing back-and-forth with prospects.
- Proactive outreach communication: Reach out to new prospects via phone and SMS, following up on quotes, and previous interest.

ConnexAI

The Results

Within just three months, the company reported significant improvements across its operations:

- 22% increase in qualified lead/active case conversion
- Average response time reduced from 2 hours to under 10 seconds
- Over 120,000 engagements per month handled autonomously
- Team refocused on high-value interactions

Key Benefits

- Scalability: AI agents handle thousands of conversations simultaneously, without downtime or delays.
- Consistency: Every prospect receives the same accurate, brand-aligned experience.
- Cost-Efficiency: Reduced reliance on large call centre teams and admin staff.
- Data-Driven Optimisation: Interactions are logged, analysed, and used to continuously refine targeting and lead scoring.

Conclusion

By integrating ConnexAI AI agents into the heart of its sales and customer service processes, this firm has created a responsive, intelligent, and highly scalable customer journey. With real-time lead qualification and outbound engagement now automated, the business is better equipped to meet rising demand and accelerate its growth in the UK.

In addition ConnexAI provided powerful AI analytics that help the business continuously refine its strategy. Through real-time dashboards and automated reporting, the company gains insights into:

- Lead/Client conversion
- Drop-off points in the qualification process
- Conversion rates across different conversation paths
- Customer sentiment and frequently asked questions

These analytics have allowed the firm to fine-tune marketing campaigns, reallocate resources to high-performing channels, and adjust AI dialogue flows to improve lead conversion. The result is a smarter, data-led sales engine that evolves with customer behaviour

Implementation

Implementation Process

1

Step 1 - Scoping Meeting

Following the award of contract, we will work with your team to create a bespoke plan for rolling out the new solution, which will include timescales based on your needs and any dependencies.

2

Step 2 - Data Gathering

During this phase we will confirm the scope of your requirements and finalise an agreed service model, whilst collecting information for build; users status, build teams, preload campaigns and other vital account data.

3

Step 3 - System Setup, Site Survey & Testing

Platform build complete based upon information collected at data gathering meeting; configure ips, build servers, secure the platform.

4

Step 4 - Training

This is where we will conduct group workshops at your offices, or another agreed location, to introduce your team to the new technology and processes. Once complete, the solution will go live.

Step 1

Step 2

Step 3

Step 3

Conclusion and Recommendation

Integrating ConnexAI will streamline customer support and boost sales for [REDACTED]. By providing a single pane of glass for agents, all communication channels are centralized, improving efficiency and reducing response times. The solution's multilingual capabilities will enhance global customer engagement, while integration with Zendesk allows for easy automation of routine tasks, letting agents focus on high-value work.

Key Benefits:

- **Enhanced Engagement:** Personalised, AI-driven interactions across touchpoints, improving customer retention.
- **Operational Efficiency:** Automation reduces manual work, leading to happier, more productive agents.
- **24/7 Support:** AI ensures instant assistance, improving satisfaction and reducing wait times.
- **Boosted Sales:** Personalised recommendations and cross-selling drive higher conversions and revenue.
- **Cost Reduction:** Automating support tasks reduces the need for large teams, lowering costs.
- **Actionable Insights:** AI captures data to optimise marketing and business decisions.
- **Scalability:** Seamlessly scale support without adding extra resources.
- **Self-Service:** Customers resolve issues independently, enhancing satisfaction.
- **Data Security:** Ensures compliance and builds customer trust.

Recommendation:

We recommend [REDACTED] adopt ConnexAI to improve customer service, reduce costs, and drive sales growth. The solution will help scale operations efficiently while delivering personalised, high-quality experiences, driving customer loyalty and business success.
